

Tank Project

This project includes a new 2.1 million gallon concrete water storage tank to meet current seismic standards and improve hydraulic conditions in the water system. The new tank will replace two existing welded steel tanks installed in 1950 and 1955.

Construction: January 2025 through March 2026

Water System Improvements by Coastside County Water District provide safe and reliable drinking water to the community. This is a \$10.9 million investment in the water system with an expected 80-year life cycle.

Thank you for your patience during construction.

Project Management by Freyer and Laureta, Inc.
